

Using the Formatter Launcher to Correct a Text Product

Use the Formatter Launcher to pull-in an already transmitted product and make corrections, while still maintaining the proper product format.

Step	Action	Notes
1	Select Formatter Launcher from the Products menu in the Menu Bar.	
2	Select Product Editor/Make Correction from the Products menu.	This can be done after you have created a product.
3	Select Load Product/Make Correction from the File menu.	
4	Enter the AWIPS Product ID of the product you want corrected.	Example: STLZFPEAX.
5	Make the necessary corrections.	If you edit the product, the word "CORRECTED" is appended to the product header.
6	When finished, click Transmit to open another window, called the <i>Transmit to AWIPS *WAN*</i> window (image below).	
		
7	Click Transmit to officially transmit the product.
